EXAMINER'S AMENDMENT

(1)

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Andrew Aldag on September 28, 2006.

The application has been amended as follows:

Claim 7 has been amended to read:

7. In a system for manufacturing fibers including a spin beam assembly, and a quenching chamber in communication with a drawing chamber, wherein the system maintains an enclosed environment between the spin beam assembly, the quenching chamber and the drawing chamber to prevent uncontrolled gas currents from entering the enclosed environment, a method of forming a non-woven web of fibers comprising:

(a) delivering a plurality of polymer streams from the spin beam assembly to spinneret orifices, wherein at least two of the polymer streams include differing polymer components, and the differing polymer components are segregated and are independently maintained at different temperatures within the spin beam assembly by providing a plurality of manifold sections within the spin beam assembly, each manifold section including a distribution pipe configured to transfer a respective polymer component to a plurality of piping sections extending within the manifold section and a heat transfer medium that flows within the manifold

section and around the piping sections extending into the manifold section so as to maintain the respective polymer component at a selected temperature;

(b) extruding the plurality of polymer streams through the spinneret orifices to form a plurality of filaments;

(c) quenching the extruded filaments by contacting the filaments with a gas stream in the quenching chamber;

(d) drawing the quenched filaments in the drawing chamber; and

(e) depositing the drawn filaments onto a forming surface to form a non-woven fibrous web on the forming surface.

(2)

Per telephone interview, the claim has been amended to limit the claim to the manifold sections each including a distribution pipe to transfer polymer to piping sections extending into the manifold section, as described in the specification.

(3)

The drawings filed January 14, 2002 are approved.
